

Attention!

- The niche (zone 1) must be made of non-flammable materials.
- The wall finish (zone 2) must withstand temperatures up to 80°C.
- The niche under the burner must be tight, airtight and made of non-flammable materials.
- Unacceptable location next to the fireplace developing curtains, curtains, etc.

It is prohibited to place flammable objects near the fireplace (within a radius of 1 m), as well as on it. Any placement items above the bio-fireplace that are sensitive to high temperatures, is done at your own discretion (as this may significantly reduce their service life). The manufacturer is not bears responsibility for damage to items resulting from exposure to high temperatures.
